

**FOUNDER-LED APPAREL SOURCING**

A sourcing partner built around your product, risk and reputation.

Aesthetic Apparels connects international buyers with suitable manufacturing partners and manages the sourcing process with clarity, accountability and commercial discipline.

OUR POSITION

We are the bridge, not another link in the chain.

01 — COMPANY STORY

Founded in 2002, Aesthetic Apparels brings more than two decades of apparel sourcing and manufacturing experience under one professional platform. The company was established to provide international brands with reliable factories, better communication, competitive pricing and dependable quality control.

FOUNDER'S PRINCIPLE

**The right factory
matters more than
simply the lowest price.**

02 — EXPERIENCE BEHIND THE COMPANY**END-TO-END EXPERTISE**

Sourcing, merchandising, product development, costing, production, quality control and international buyer management.

PRODUCT, MARKET & CLIENT FOCUS

Denim, woven and knitwear programmes for international apparel brands, retailers and private-label businesses, particularly in North America and Europe.

RISK AWARENESS

Experience helps identify risks early, select suitable factories and manage execution before issues affect the buyer.

DELIVERY RECORD

Complex apparel programmes managed from initial development through production and shipment.

03 — THE CLIENT PROMISE**Honesty**

Honest, transparent advice and clear commercial communication.

Accountability

Active ownership and accountability from development through shipment.

Proactive communication

Issues are identified, communicated and addressed before escalation.

**BUSINESS MODEL & CAPABILITIES**

From product brief to final shipment.

We act as an extension of the buyer's sourcing team, aligning product, quality, quantity, price and delivery requirements with the right manufacturing capability.

04 — WHY WORK WITH A SOURCING PARTNER**SAVE TIME**

One professional point of coordination across factories, development and production.

REDUCE RISK

Local oversight, inspections and proactive follow-up improve control.

BUY BETTER

Factory matching and informed negotiation support stronger commercial outcomes.

05 — HOW WE MANAGE EACH PROGRAMME**1****DEVELOP**

Product brief, fabrics, trims and samples.

2**MATCH**

Factory capability, capacity, compliance and costing.

3**CONTROL**

Production follow-up, inline checks and testing.

4**DELIVER**

Final inspection, packaging and shipment coordination.

06 — FACTORY SELECTION & BUYER PROTECTION

- Quality capability
- Available capacity
- Compliance status
- Commercial fit
- Delivery reliability
- Technical suitability

Buyer interests are protected through careful factory selection, close production follow-up, inspections, laboratory testing and proactive communication throughout the programme.

07 — PRODUCT AND SERVICE COVERAGE

Denim | Chinos | Cargos | Trousers | Shorts | Jackets | Shirts | T-shirts | Polos | Hoodies | Fleece

Fabrics, trims, samples, packaging, labelling, testing and shipment coordination can be managed as part of the complete sourcing service.

**CERTIFICATIONS, COMPLIANCE & TRUST**

Recognised standards supporting responsible textile production.

Across our manufacturing network, relevant facilities may hold recognised material, environmental and social-compliance credentials. These systems strengthen traceability, responsible production and buyer confidence when matched to the requirements of each programme.

08 — MATERIAL AND SUSTAINABILITY STANDARDS**GLOBAL RECYCLED STANDARD (GRS)**

A Textile Exchange standard that verifies recycled materials and chain of custody. It also adds processing requirements covering social, environmental and chemical practices.

ORGANIC CONTENT STANDARD (OCS)

A voluntary global standard for third-party certification of organic material content and chain of custody, supporting credible and traceable organic-content claims.

RECYCLED CLAIM STANDARD (RCS)

A chain-of-custody standard that verifies and tracks recycled raw materials through the supply chain, helping substantiate recycled-content claims.

GLOBAL ORGANIC TEXTILE STANDARD (GOTS)

A globally recognised certification for textiles made with organic fibres. It combines environmental, human-rights, social and traceability requirements across certified processing stages.

09 — SOCIAL COMPLIANCE AND ETHICAL SOURCING**AMFORI BSCI**

A social-risk management system used to identify, assess, verify and mitigate risks involving working conditions, fair practices and vulnerable workers. Shared audit data can reduce duplication for buyers.

WRAP

An independent social-compliance certification for sewn-products facilities. WRAP's 12 Principles address labour practices, health and safety, environmental practices, legal compliance and customs security.

SEDEX / SMETA

Sedex is a responsible-sourcing data platform; SMETA is its on-site audit methodology. It assesses labour, health and safety, environmental and business-ethics performance and enables reports to be shared with buyers.

BUYER BENEFIT

These credentials support documented material claims, stronger supply-chain visibility and greater confidence in workplace and environmental controls. The result is better-informed sourcing with clearer evidence behind responsible-production commitments.

**SECURITY, QUALITY & BUYER READINESS**

Systems that strengthen control from factory floor to destination.

Security programmes, quality-management systems and buyer-specific requirements add further layers of control. Together, they help reduce operational risk, support consistent execution and improve readiness for international customers.

10 — SUPPLY-CHAIN SECURITY**C-TPAT**

The U.S. Customs and Border Protection trade-security partnership promotes documented controls that protect international supply chains from security threats. Participation can support safer and more efficient trade.

GLOBAL SECURITY VERIFICATION (GSV)

Intertek's GSV programme integrates recognised supply-chain security initiatives, including C-TPAT. It helps importers and suppliers assess risk, strengthen facility controls and improve shipment security.

11 — QUALITY MANAGEMENT AND ACCREDITED ASSURANCE**ISO 9001 QUALITY MANAGEMENT**

The international standard for quality-management systems. It provides a framework for consistent products and services, efficient processes, continual improvement and stronger customer focus.

ISOQAR / UKAS-ACCREDITED CERTIFICATION

ISOQAR is a certification body; UKAS accredits certification bodies and confirms their competence. A valid UKAS-accredited ISO 9001 certificate provides stronger confidence in independent certification.

12 — BUYER-SPECIFIC PROGRAMMES**INDITEX SUPPLIER REQUIREMENTS**

Inditex is a buyer approval and compliance framework rather than a public certification. Approved factories are expected to meet the group's supplier code and undergo social, special and traceability audits.

KROGER VENDOR REQUIREMENTS

Kroger is a buyer-specific vendor programme rather than a certification. Supplier qualification involves applicable policies, responsible-sourcing expectations, documentation and product or facility requirements.

A PRACTICAL TRUST SYSTEM

For every programme, certification scope, validity, audit status and buyer approvals are checked against the selected factory, product and destination. Credentials vary by facility and are confirmed during factory nomination before claims are made.

VERIFIED FIT | DOCUMENTED CONTROL | RESPONSIBLE EXECUTION**FOUNDER'S MESSAGE**

Don't just look for a factory. Look for a partner who understands your product, your expectations and your business.

Aesthetic Apparels is registered and enrolled with the Federation of Pakistan Chambers of Commerce and Industry (FPCCI).
